Our Success Story

Mercury Systems provide the royal treatment

Steeped in history, the current **Fulham Palace** buildings date from the 15th to 20th century and are Grade One listed. Their national importance meant their new security system needed to protect their future.

With archaeological evidence of Iron Age and Roman settlers and the foundations of a medieval palace, the present site of Fulham Palace is of great historic importance. Whilst its buildings are full of history, it needed a modern system to protect the buildings and their visitors, without detracting from the original features.

Until 1973 the Palace was the residence of the Bishop of London and today the Palace has many uses including offices, museum, entertaining space for weddings and events as well as stunning gardens to be explored. The sympathetic security designs needed to cover every aspect of the property in use, as well as out of hours. Working closely with the Fulham Palace Foundation to adhere to all the requirements of this protected building, Mercury designed and installed:

- Access Control systems separate the private and public areas
- Perimeter CCTV
- Internal HD CCTV in public areas
- Automatic Gates, Intruder and Fire Alarms
- Maintenance to ensure complete protection at all times
