## Achieving the highest standards in Fire Safety

This new development wanted to go above and beyond to protect their residents. With a reputation for their fire safety expertise – step in Mercury Systems to ensure the results for **Blackhorse Mills** were just as impressive as the new development itself.

The major regeneration scheme at Blackhorse Mills involved creating 440 new studios, across five blocks. These consisted of one, two and three-bedroom homes, as well as a wellness centre, work spaces, a club room and private dining rooms overlooking the Walthamstow Wetlands. The requirements for all new developments in terms of fire safety are stringently controlled, and the responsibility lays clearly on the developers to ensure that these are met.

Trusting in Mercury to design, supply and deliver a future-proofed system, a bespoke new fire safety system including over 500 devices was provided, as well as:

- **System integration**
- **Air sampling detection (Vesda)**
- **Fully networked Fire alarm system (MXPro 5)**
- **Active repeater panels (MXPro 5)**
- **Beam detection (Xtralis)**
- **Disabled refuge & toilet alarm systems (Baldwin Boxall)**
- **24/7 alarm monitoring (BT Redcare)**

The fire system installed was as forward thinking, modern and discreet, as the sleek interiors.

Mercury delivered and the client was delighted with the results:

*"Our development at Blackhorse Mills is leading the way in residential experience, quality and lifestyle. But safety is top of our agenda – for residents, visitors and employees. Our fire safety requirements were above and beyond the standard, so we needed a supplier who can also go above and beyond. Mercury were just what we needed."*
