Mercury gets security pass to access all areas

When Mercury were approached by a **high profile client** to deliver the highest levels of security, they rose to the challenge. The brief was met with a masterclass in cutting edge Access Control Systems.

Mercury were briefed with supplying and replacing the existing Access Control System to provide state of the art protection, alongside the addition of new turnstiles to this Midlands based educational centre. Their reputation for confidentiality, detailed design, leading technology, and seamless installation were trusted to provide indisputable safety and security for all building occupants, employees and visitors.

This project would require the full spectrum of access technology, in addition to gates, barriers and a Public Address System. Due to the nature of the building, Mercury's team of expert engineers needed to work closely with the customer estates and maintenance teams, as well as arrange to carry out the works at weekends and evenings as required.

Mercury expertly designed, supplied and installed alongside full network installation:

- 64 security doors
- 7 speed gates
- Bespoke glass partitioning
- 300 speaker Public Address system
- 14 audio entry points
- 6 disabled toilet alarms
- Disabled entrances (air lock system) with full automation and spoken guidance
- 2 separate control rooms to function as 1 in case of a failure in either
- Lock-down system

"Security is at the top of our agenda. We needed to secure the building whilst ensuring that all access points were operating with the latest protection systems. Mercury came highly recommended and did not disappoint!"
