## Mercury provides a master class in fire safety

Responsible for the protection of everyone in their care and on their site, **Shenfield High School** took their responsibilities very seriously. They needed a Fire System that would extinguish any fire safety concerns – and they knew just who to ask!

Shenfield High School is a coeducational secondary school located in Shenfield, Essex, England. It has over 1200 students age 11-18 on roll, including 300 in the sixth form.

The school needed the complete removal of the old system and a brand new fire system which met all of the required standards, provided clear and safe escape routes and responsive fire stopping solutions in the older parts of the school.

Mercury worked closely with Shenfield staff and management teams to ensure that the day to day running of the school incurred minimal disruption.

Impressed with the excellent levels of support on hand, Stuart Roberts, Business Manager commented:

*"Mercury worked with us at every stage of the project to ensure the right solution was delivered to meet our needs. Mercury took all the challenges of our site in their stride and were very accommodating and flexible. We are very pleased with the quality of workmanship and brilliant new systems we have in place. We are now looking forward to working with Mercury to maintain our new system which will provide assurance to the school for many years to come."*

Mercury expertly designed, supplied and installed:

- **Fully Networked Fire Alarm System with 6 MXpro5 Control Panels and over 290 devices**
- **200 Emergency Lights and Escape Route signage**
- **11 sets of Bespoke Fire doors integrated into the Fire Alarm System**
